

### ABSTRACT OF THE DISCLOSURE

A loader for agricultural tractors having standard, hydraulically maneuverable, parallel lifting arms. The lifting arms are pivotally mounted at the rear of the tractor, which also includes a centrally positioned attachment member between the lifting arms. The loader includes two parallel loader arms for attachment to respective lifting arms and that also extend rearwardly from the lifting arms. A hydraulically-operated, axially extensible center rod extends outwardly from the tractor center attachment member, substantially parallel to the lifting arms. The outer ends of the loader arms and the outer end of the center rod are connected to a suitable working implement or appliance that is supported for tilting and upward and downward movement relative to the tractor.
